PRESSURE VESSELS PACKING ACCORDING TO TRANSPORTATION TYPE

General

This document is intended to describe in general terms, the model of pallet that will be used for each shipment of vessels, according the requirements of the client.

Models of pallets depending on the type of shipment

1.- Land transport by truck:

The base of the pallet is designed for lifting with forklift and/or crane.

2.- Sea transport in container (exclusive use).

The base of the pallet is designed for lifting with fork lift and/or crane.

3.- Sea transport in container (Grupage-LCL).

The base of the pallet is designed for lifting with forklift and/or crane.

4.- Air transport:

The base of the pallet is designed for lifting with forklift and/or crane.

Marking:

Every single pallet will have marked out the area for lifting, either with crane or forklift.

Basic instructions for handling and lifting the pallets:

There is a working instruction (W.I:___) where it is described in detail the handling, loading and unloading of the pallets.

In general, it is highly recommended using both a crane and a forklift for handling, loading and unloading of the pallets.

- Using a forklift:

There is a marked-out area in red (see picture above), where the pallet must be lifted.

- **Using a crane:**

There is a marked out area in red (see picture above), where the pallet must be lifted.
